I3D:bio OMERO user training slides

HOW TO USE THE SLIDE TEMPLATES

- To use your institution's slide design and logo, adjust the slides of this presentation using the „slide master"
Note that these slides are optimized for 16:9 screen presentation layout
- Check the slides for <mark>yellow-marked text</mark> and insert the information according to your own institute's infrastructure.
- Feel free to use this material for videos, teaching, guidelines, etc., at your institute
- Please cite us (e.g., on page 1) when re-using this material or derivatives of it:

- If not stated otherwise, the content of this material (except for logos) is published under a Creative Commons Attribution 4.0 license.
- This work is funded by the Deutsche Forschungsgemeinschaft (DFG, German Research Foundation) – 462231789 (Information Infrastructure for BioImage Data, I3D:bio)

Disclaimer
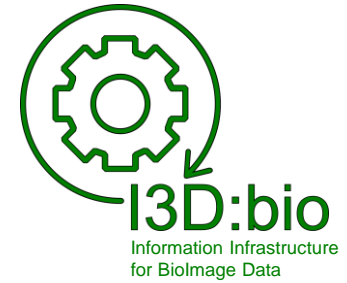

- The following slides are intended for reuse after <mark>substituting yellow-marked text</mark> with the relevant information at your institute.
- Some content may not apply to the specific setup of the OMERO installation at your institute.

The content reflects solely the authors' opinions and does not speak on behalf of the original software, its developers, or other cited community resources.

Review: OMERO for Bioimaging Data Management

- OMERO is an open-source software to allow centralized, secure, collaborative, and interactive storage and management of microscopy data.

- Data is well organized, and groups (with different permission levels) can access and edit data collaboratively.

- OMERO can be accessed by users via clients (e.g., desktop client or web client) and combined with other software (Fiji, QuPath, etc.).

- Structured metadata annotation allows for flexible data organization and enrichment. In particular, Tags and Key-Value-Pairs add value to the data.

- OMERO can be used with scripts and extensions for many different functions.

What more can you do with OMERO?

ADD LOGO SMALL

More Extensions, Scripts, and Plugins

- OMERO.iviewer – Explore images and adjust settings

- OMERO.figure – Create publication figures in OMERO

- OMERO.parade – Data Mining in metadata and analysis results in OMERO

- OMERO.table – attach tabular results to your images/datasets/projects

- OMERO.downloader – retrieve original files from the OMERO server

- OMERO.openLink – share access to your data in OMERO and download data from the web

More extensions (not shown in this slideshow):

- OMERO.mapr – Standardize search fields in the OMERO instance

- OMERO.FPBioimage – a 3D volume rendering tool for images in OMERO

- ezomero („easy OMERO") – a collection of command line tools for OMERO

Note: These extensions, scripts, and plugins may or may not be installed in your OMERO instance.
Please check for their availability. Contact your OMERO administrator if the required features are missing.

ADD LOGO SMALL

OMERO.iviewer – Explore your images and adjust settings
Learn how to use OMERO.iviewer:
OMERO.iviewer for beginners introduction (P. Walczysko): https://www.youtube.com/watch?v=xshaOwmoqe0 (~8 min)
OMERO.iviewer guide: https://omero-guides.readthedocs.io/en/latest/iviewer/docs/index.html   (read online)

https://www.openmicroscopy.org/omero/iviewer/ (last access: 2023-08-24)   ADD LOGO SMALL

OMERO.figure – create publication-ready figures in OMERO

- Images are linked to original files (no JPEG/TIFF/PNG exports!)
- Export your figure to a vector pdf
- Access the original images from the figure at any time
- Automatize inset creation and labelling
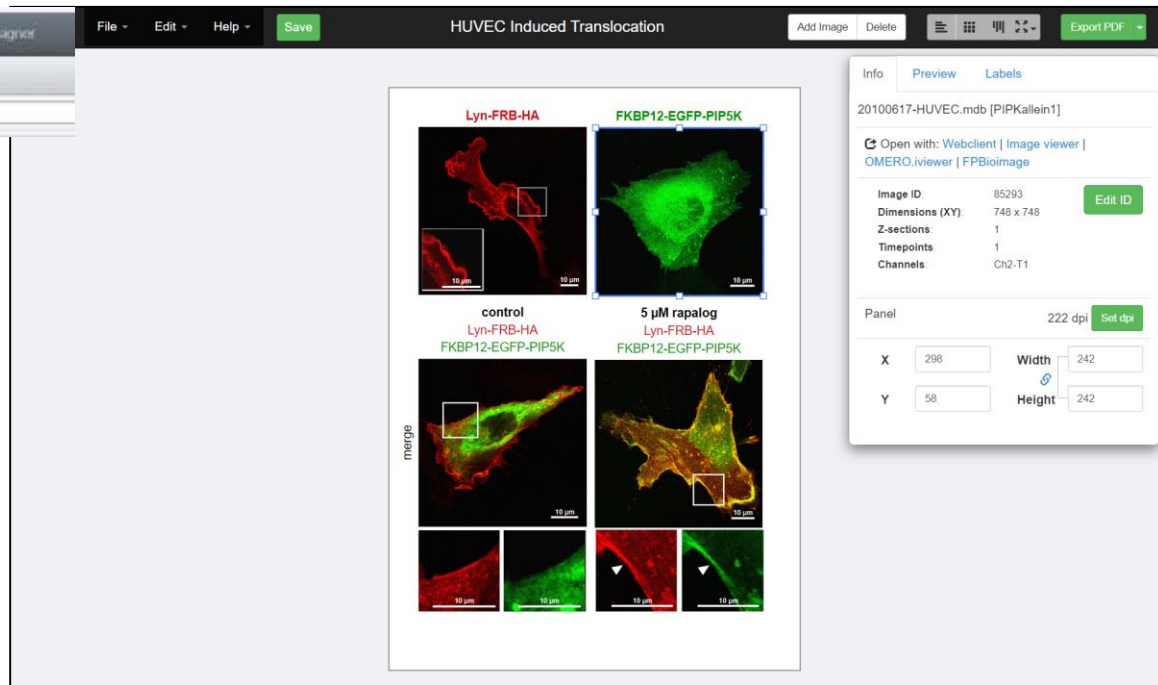

Learn how to use OMERO.figure:

OMERO.figure for beginners introduction (P. Walczysko): https://www.youtube.com/watch?v=i3jXplmD81s   (~20 min)
OMERO.figure workshop (W. Moore): https://www.youtube.com/watch?v=E0Fgw1uUAXA&t=1440s   (~35 min)

OMERO.figure demo by E. Ratamero: https://www.youtube.com/watch?v=YeCFaB7VAAQ   (~10 min)

Official guide: https://omero-guides.readthedocs.io/en/latest/figure/docs/index.html

ADD LOGO SMALL

OMERO.parade – data mining in metadata and analysis results

- Review pooled metadata, annotation quantifications, or csv-table based analysis results in dot-plots or tables within OMERO.

- Access the original linked image directly from the dots in the dot-plot

- NOTE:
  - Specific formatting requirements for csv attachments from analysis results must be met! (e.g., use "," and not ";" as the delimiter!)
  - Datasets must be outside of Projects for the analysis to work.
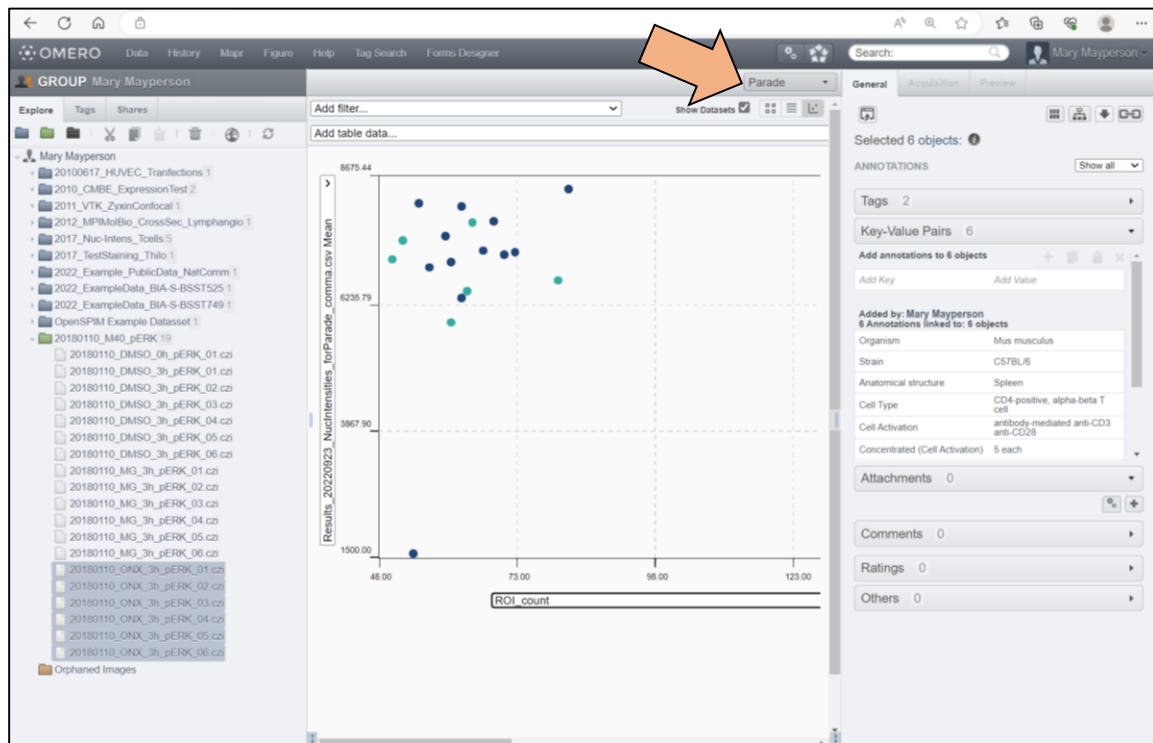

Learn how to use OMERO.parade:
OMERO.parade introduction (P. Walczysko): https://www.youtube.com/watch?v=Bmi31J04A_E (~20 min)
EPFL BIOP OMERO wiki: https://wiki-biop.epfl.ch/en/Image_Storage/OMERO/OmeroParade (read online)

ADD LOGO SMALL

OMERO.table – attach tabular results to your images/datasets/projects

- Attach analysis results to your data in an OMERO.table-compatible format
- Add the Table as „Bulk Annotations" linking results to images in OMERO via the „Populate_metadata" script
- Use the table in OMERO.parade
- NOTE:
  - Specific formatting requirements for csv attachments from analysis results must be met! (e.g., use "," and not ";" as the delimiter!)

bulk_annotations

Download as CSV: Whole Table
Show current page as: CSV | JSON

To filter rows you can use a query based on named columns. For example, to filter for rows where **Area** is greater than **1531.937** add ?query=Area>1531.937 to the URL.
For a more complex example, try ?query=(Area>1531.937)&(Area<2332.331)

Table rows: **19.**

OMERO.downloader – retrieve original files from OMERO in batch

- **OMERO.web** offers
  - *Download* of original image files at single image level
  - Batch *export* (e.g., to OME-TIFF) of Datasets
- **OMERO.downloader** offers:
  - *Download* of original image files in batch from the OMERO server
- NOTE:
  - OMERO.downloader is a command line tool, and it requires the user to be at least comfortable with some level of command line usage, and java installation.

Learn how to retrieve and use the OMERO.downloader:
https://github.com/ome/omero-downloader/tree/master

# OMERO.openLink – batch download from OMERO.web

OMERO.openlink

An OMERO.web app and script for sharing data and prepare data for web download via **curl** (included in the newer Windows 10 builds).

You can generate URL's for specific data for batch web download via **curl** and to share data with other collaborates that are not in your group or member of your OMERO system. All operations are available in OMERO.web.

Features

- Create coded URL for html page with read only URL links to your data
- You can add data to an existing page
- You can delete whole pages
- Fast batch download for all data of one openlink area with **curl** (skip already downloaded files, compressed for transfer)
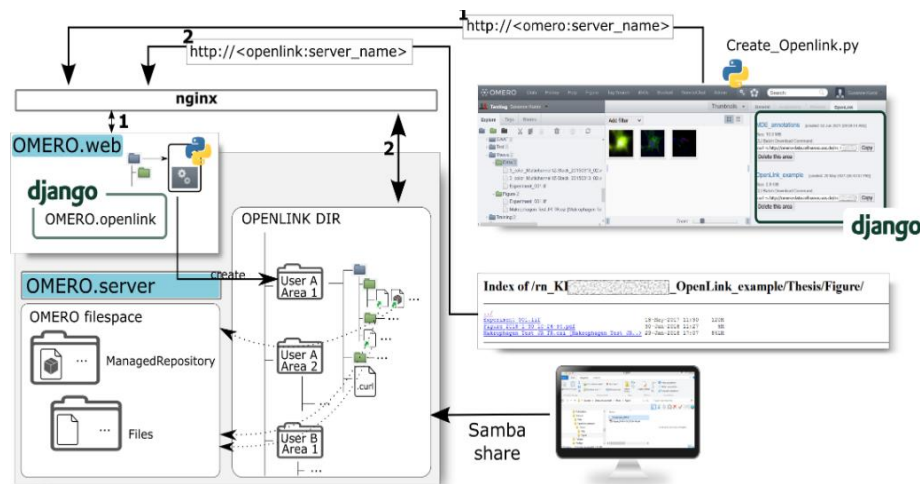

Learn more about OMERO.openLink:
https://github.com/sukunis/OMERO.openlink (last access: 2023-08-24)
